

HTC SUPERPREP™ SERIES

Tools tougher than any job.

Good results require good preparation. This is especially important when working with concrete floors. Some jobs are more demanding than others and a floor grinding pro knows what will make the difference. We do too.

HTC has focused on developing the latest line of diamond tools expressly for floor prep. Whether it's a matter of such demanding work as removing old paint or levelling compound so that it can be replaced with a new coating, or levelling a concrete surface prior to grinding and polishing, the choice of tools is crucial for achieving the best final results.

The HTC Superprep™ series of tools has all capabilities you need to deliver profitable results and finish the job on time. The series combines the entirely new EZ PREP series, along with the well-known T-Rex® and Ravager tools, both of which have been further developed and improved. All gathered and packaged under the name HTC Superprep™ – the absolute toughest tooling series from HTC.

The toughest HTC tools in a single series

Tools for all types of floor prep jobs

Newly developed EZ PREP series

Further developed T-Rex® and Ravager tools

Right tool for the job

Removal of coatings 0-1 mm

EZ PREP S1 / M1 / H1

- Effective all-around tool for floor stripping
- For surface levelling of concrete, such as prior to laying floors
- Adapted to the underlying concrete's hardness (soft, medium, hard)
- Controlled grinding for thin flooring, 0-1 mm

EZ PREP S1
soft concrete

EZ PREP M1
medium concrete

EZ PREP H1
hard concrete

Removal of coatings 0-2 mm

EZ PREP 0

- Aggressive stripping tool, leaves a coarser surface than the PREP 1 tools
- With crushed PCDs for tough jobs
- Broad application area for removal of various types of coatings 0-2 mm, glue residue, paint, levelling compound or similar.
- Works well on both hard and soft surfaces.

EZ PREP 0

Removal of coatings 1-3 mm

EZ T-REX® CLASSIC

- 2 PCD segments
- Suitable for smaller grinders (HTC 500 and smaller)
- With/without protective segments
- Available as A & B directional versions*

EZ T-REX® CLASSIC A
Protect seg.

EZ T-REX® CLASSIC B
Protect seg.

EZ T-REX® CLASSIC A

EZ T-REX® CLASSIC B

EZ T-REX® SUPER II A
Protect seg.

EZ T-REX® SUPER II B
Protect seg.

EZ T-REX® SUPER II A

EZ T-REX® SUPER II B

T-REX® RING CLASSIC 160 MM

T-REX® RING SUPER 230 MM

T-REX® RING SUPER 270 MM

Removal of coatings >3 mm

EZ T-REX® DOME II

- Removes toughest coatings
- 1 PCD segment – scratches the surface
- 1 PCD Dome segment – opens the surface
- Leaves a coarse scratch pattern
- With protective segments
- Available as A & B directional versions*

EZ T-REX® DOME A

EZ T-REX® DOME B

Create a hammered, structured surface

HTC RAVAGER

- Creates a hammered surface with high friction
- Quickly exposes large aggregate
- Quickly removes all coatings from hard to brittle
- Creates a coarse surface suitable for overlay castings
- A very good alternative to milling

HTC RAVAGER 180 MM

HTC RAVAGER 230 MM

HTC RAVAGER 270 MM

New developments that make the difference

CRUSHED PCD FOR HIGH PERFORMANCE

EZ PREP 0 is a new tool with crushed polycrystalline diamonds (PCD) for tough jobs and speedy grinding. Has a broad application area for both soft and hard surfaces.

INTEGRATED DUST CHANNELS

T-REX® RING SUPER has been designed with channels for effective removal of grinding residue to keep the cutting edge clean around the PCDs. Countersunk holes for hex bolts, enable easier and more secure mounting, even in the roughest environments.

NEW TOOL FOR ABRASIVE SURFACES

EZ PREP S1 has been developed for soft surfaces, with a focus on surface levelling and removal of thinner coatings, 0-1 mm.

RAVAGER WITH IMPROVED WEAR RESISTANCE

HTC RAVAGER is further developed with more pins per roll. (48 pcs vs 30 pcs earlier version). This gives improved wear resistance and a more homogenous surface as a result.

* NOTE: Grinders with four grinding heads require both the A and B versions due to the different directions of rotation.
